 - Approx. Limits of PMF Dam-Failure Inundation

Inflow Design Flood (IDF) failure assumes a dam failure at the highest calculated reservoir elevation due to a probable maximum flood

The methods used to develop inundation zones and flood wave arrival times are approximate and should only be used as guidance for establishing evacuation zones. Actual areas inundated will depend on actual failure and pre-failure hydrologic conditions and may differ significantly from information shown on maps.

This map meets all applicable state and federal standards and has been prepared in consideration of all potential downstream hazards by a licensed civil engineer.

Inundation Map for the Hypothetical Inflow Design Flood Failure of **Guadalupe Dam**
 Federal Dam ID: CA00294 State Dam ID: 72-009

Overview Sheet
 1 in = 8,000 feet
